#### 1. Process Overview

The M2M Remote SIM Provisioning (RSP) process allows for the remote provisioning and management of embedded SIMs (eUICC) in M2M devices. The implementation follows the GSMA SGP.02 specification and consists of the following key steps:

- 1. Root CA initialization Certificate authority setup for secure communication
- 2. SM-DP and SM-SR setup Subscription Manager entities initialization
- 3. eUICC registration Device registers with SM-SR using PSK-TLS
- 4. ISD-P creation Creation of security domain for profile installation
- 5. Key establishment Secure ECDH key exchange for end-to-end encryption
- 6. Profile preparation SM-DP prepares the profile data package
- 7. Profile installation SM-SR delivers and installs profile on eUICC
- 8. Profile enabling Newly installed profile is enabled on the eUICC
